

MeTro.69

PR - 25 words

MeTro.69 is an application to validate automatically the TR-069 protocol implemented in CPEs in a fast, simple and reliable way.

PR - 50 words

MeTro.69 is a Windows software tool that automatically validates the TR-069 protocol implemented in routers and other CPEs according to the BBF specifications. It reduces testing time while providing trusted results, reports and traceability.

PR - 100 words

Advanced testing tool that automates the acceptance test of TR-069 protocols implemented in routers and other CPEs. MeTro.69 facilitates the complete validation by means of a Library of Test Cases. It also supports BBF data models including TR-181. A complete set of tools such as FTP, HTTP and STUN servers are also included to set up the testing scenario are included e.g., BBF compliant ACS, traffic generator and analyser. Users can edit proprietary test cases without the need of a SW engineer. It can work against commercial ACS brands. Automatic Wireshark captures are available for debugging tasks.
