

# Metro.OTDR-F2

## **PR - 25 words**

Metro.OTDR-F2 is a pocket-sized OTDR designed for testing optical networks. It is small, light and robust.

## **PR - 50 words**

Metro.OTDR-F2 is a pocket-sized OTDR designed for testing optical networks. It is small, light and robust, has three wavelengths and VLF. It is built in a portable platform with batteries that make it especially suitable for testing PON networks.

## **PR - 100 words**

Metro.OTDR-F2 is a good tool for the installation and maintenance of FTTH networks. It is a low cost solution compared with other vendors and has main interfaces and accessories required in field OTDR to install, discover faults, measure the performance and create advanced reports. Field engineers can troubleshoot running manual or automated tests. Most of the tests tailored for each type of fibre and users may execute and save curves ready for further analysis. All together will facilitate to identify anomalies in the optical layer.
